TI4

1. Introduction (79)

Internet	11,13f
Protocol	15f
TCP/UDP	20f
Circuit Switching (TDM,FDM)	24-28
Packet Switching	29-35
Access networks	37-42
Physical media	43-45
ISPs	48-50
Delay & loss in packet switched networks	54-59
Protocol / Service / Layer	62-64
OSI reference model	65-67
Description & evaluation of protocols	69-73
Internet history	75-78

2) Application Layer (94)

Client-Server architecture	4
P2P architecture	5
Processes communicating, Sockets	7,8
transport services	9-12
HTTP	14-16
nonpersistent vs. persistent HTTP	17-21
request message	22-25
response message	26f
Caching (Proxies)	29-34
Dynamic Web Documents	43-50
DNS	52-64
iterated vs. recursive query	58f
DNS records	61
DNS message	62f
P2P	66-73
centralized directory (Napster)	67f
fully distributed (Gnutella)	69-71
hierarchical (KaZaA)	72f
Socket programming	75
TCP	76-80
Java	81-84
Distributed systems and middleware	86-94

3) Transport Layer (146)

transport vs. network layer	2f
Multiplexing/demultiplexing	5f
UDP	7f
TCP	9f

UDP 12-15
segment format 13
checksum 14f
Stop-and-Wait 17-70
FSMs 21
Sender-FSM 22
Receiver-FSM 23
normal operation 24-31
packet loss 32-40
ack loss 41-50
delayed ack 51-61
performance analysis
bandwidth-delay-product=channel length in bits=RD 62-63
channel length in packets a=(RD)/L 64-66
error-free 67
with-errors 68-70
Pipelined protocols = sliding window protocols 72
Go-Back-N 73-77
Sender 73,75
Receiver 74,76
performance 89f
Selective Repeat 78-80
Sender 81
Receiver 82
performance 88
performance 84-87,91f
Flow & Congestion Control 94f
TCP 97,105
segment format 98
connection setup 99f
connection close 101f
SEQ# & ACK# 104
sender 106f
retransmission scenarios 108f
ACK generation 110
RTT & Timeout 111-114
Fast Retransmit 115f
Flow Control 117-119
Congestion Control 120,126f
AIMD 121
Slow Start 122f
conservative after timeout 124f
throughput 128
fairness 129f
Selective ACK 131
TCP Implementations 132

HTTP/TCP Delays	134,144-146
fixed congestion	135f
slow start	137-143
4) Network Layer (104)	2
routing and forwarding	3f
network- vs. transport layer	5
service models	6f
virtual circuits	8-11
datagram networks	12f
Internet Network Layer	15
IP datagram format	16
IP addressing	17-20
subnets	21-24
routing table	25-28
IPv4 address problems	29-33
NAT (Network address translation)	34
IP fragmentation & reassembly	39f
ICMP (Internet Control Message Protocol)	41
Traceroute	42
Ipv6	43-48
Router	50-59
Routing Algorithms	61,66,80
Hierarchical routing	62-64
link-state (Dijkstra)	67-71
distance vector (Bellman-Ford)	72-79
Routing in the Internet	
RIP (Routing Information Protocol)	82-87
OSPF (Open Shortest Path First)	88-95
BGP (Border Gateway Protocol)	96-100
other routing problems	102-104
5) Link Layer (101)	2
services	3f
error detection & correction	7f
CRC (cyclic redundancy check)	9f
multiple access protocols	12f
channel partitioning	14-19
random access	20,43,49
ALOHA	21-34
Slotted ALOHA	35f
CSMA	37-43
CSMA/CD	44-48
Reservation ALOHA	50
taking turns	51
token-passing	52

MAC addresses 58f
ARP (address resolution protocol) 60-63
Ethernet 65-72
  frame structure 66f
HUB 71,74
Switch 75-83
WLAN 85-101
  802.11* 87
  RTS/CTS 95f
  frame 97-99

6) Physical Layer (40)
Fourier Analysis 2-8
Nyquist theorem 9
Shannon theorem 10f
analog vs. digital communication 12-14
digitalization 16-21
modulation 23-26
transmission media
  storage media 28
  twisted pair 29f
  coaxial cable 31
  fiber optics 32-35
  electromagnetic waves 36-40
